Retractable stun gun tether

The rugged Gear Keeper Retractable Stun-Gun Tether from **Hammerhead Industries Inc.**, features 24 ounces of retraction strength, allowing the Taser to be quickly drawn into "aiming" position when it's needed, and be securely suspended back to its post when it's not. This feature ensures added security for an electronic control device (ECD), especially when the need arises to quickly switch from using the ECD to a more lethal firearm. Officers will be at ease knowing that their ECD is always secured at the waist, eliminating any possibility of it being dropped and picked up to be used against them.

Contraband cell location

Berkeley Varitronics Systems Inc.'s (BVS) Pro series handheld Wolfhound-PRO alerts security and correctional professionals to nearby cell phone activity with a bright OLED screen and integrated vibration notification. The device runs on an internal Li-ION rechargeable power system for up to 4 hours enabling security personnel to continuously scan for all cellular voice, text or data transmissions.

Full-body infrared imaging

Iscon Video Imaging's thermo-conductive infrared imaging system helps to eliminate smuggling and trafficking of contraband hidden in clothing or glued to the body. In 30 seconds Iscon's thermo-conductive, infrared technology produces real time, high-resolution, 360-degree whole-body scans without using radiation. Real-time images quickly reveal concealed objects that might not otherwise be detected including cell phones, thin plastic shanks, tobacco, liquids, wood, powder, pills and tiny metal objects such as silverware or keys.

Lightweight, long-range camera and video recorder

The **Digital Ally FirstVu** compact digital video/audio recorder and photographic camera now weighs 6.4 ounces and captures an impressive 133 degree field of view. These enhancements keep the system as unobtrusive as possible by removing the need to aim the camera and adding

negligible weight for officers already encumbered by other equipment. The FirstVu is designed to capture hands-free evidence anytime or anywhere needed. To eliminate the issue of obstructing cables and additional components, the FirstVu is completely housed in a single enclosure. Both impact and weather resistant, the FirstVu utilizes solid state memory that is unaffected by violent motion. An advanced clip system allows secure locking or quick transfer between a variety of locations, such as from the wearable motion-canceling uniform fastener to the windshield of a vehicle.

Bumper wall protection

PERMALIGHT's new Type D Bumper Guard comes with a strong adhesive backing and easily applies to clean, dust-free flat surfaces. Use the alerting yellow-black bumper on protrusions, sharp corners, metal pipes and more to protect inmates from injury. Protect walls by preventing push carts from bumping into drywall. PERMALIGHT's bumper product line has nine different shapes and three color combinations, including glow-in-the-dark and daylight fluorescent.
