## Multi-Purpose, All-Weather Digital Video/Audio System

*Digital Ally, Inc. Introduces the DV-500 Ultra Digital Video System for Motorcycles and Watercraft*

The DV-500 Ultra will allow police officers and security personnel that patrol on motorcycles, boats and other mobile units to have digital video capabilities similar to those provided by our DVM-500 In-Car Video System. The DV-500 Ultra utilizes the same advanced technology and solid state memory, but is designed for use in harsh weather and environmental conditions.

The DV-500 Ultra features a small, compact and durable design with multiple mounting options; weatherproof controls; monitor and camera; rugged and durable solid state memory for recording video and audio; integrated GPS with 'Mark' feature; up to 60 seconds of pre-event recording; a wireless microphone; and more.

The DV-500 Ultra can be used for installation on motorcycles, ATVs, security carts, boats and other watercraft. It includes many powerful features:

- Small, compact and durable with multiple mounting options
- Weatherproof controls, monitor and camera
- Ultra-bright, sunlight-readable monitor
- Rugged, durable and reliable solid state memory
- Internal battery backup
- Integrated GPS with 'Mark' feature
- Up to 60 seconds of pre-event recording

- Automatic record triggers
- Records vehicle data along with audio and video evidence
- Optional Infra-Red camera
- 900 MHz wireless microphone
- VideoManager™ management & playback software

## #5000 Tire Mobility Kit

Most tire mobility kits on the market today consist of an air compressor and a can of sealant. These two items are hooked together and powered thru an adapter (cigarette lighter) to provide an instant fix. The new Stop & Go Tire Mobility Kit combines an American made air compressor capable of producing 100 psi of pressure to fully inflate a car or truck tire in 5-6 minutes with the unique Pocket Tire Plugger. This is a tire repair kit that provides (15) mushroom shaped rubber plugs that are installed into your tire while it stays on the wheel. No rubber cement is needed as the stem of the plug expands under pressure to fill the punctured area. Once the stem is pulled

away from the tire, the mushroom head seats against the inner wall allowing no air to escape. As you use the air compressor to re-inflate your tire, you can monitor its performance by observing the in-line Accu-Gage with bleeder valve and brass clip-on valve chuck. This kit is made of the highest quality materials and provides for multiple repairs.
