

## **VoiceVault™ Advanced Wireless Microphone Now Available With Digital Ally's DVM-500Plus In-Car Video System**

Digital Ally, Inc., which develops, manufactures and sells advanced law enforcement video systems, LIDAR speed guns and fleet event recorders, announced that all new orders of the *DVM-500Plus* In-Car Video System will now include the *VoiceVault™* Advanced Wireless Microphone at no additional cost to the customer.

Previously only available with the *DVM-750* In-Car Video System, the *VoiceVault* offers the same extended range, voice optimization and noise filtering, and fully digital audio transmission with true frequency hopping technology as the previous *DVM-500Plus* system's mic. However, it also offers the industry-first feature of recording up to two hours of audio evidence onto On-Board Solid State Memory when the mic is out of range or the signal to the in-car video system is interrupted. The *VoiceVault* also records its own metadata to later link with recordings from the in-car video system for the same incidents when loaded into Digital Ally's *VideoManager* software.

For more information, contact Digital Ally at 800-440-4947, [sales@digitalallyinc.com](mailto:sales@digitalallyinc.com) or visit [www.digitalallyinc.com](http://www.digitalallyinc.com).

### **About Digital Ally, Inc.**

Digital Ally provides a complete line of digital in-car video systems integrated into a rear-view mirror; a waterproof digital video system that is modular to fit motorcycles, boats, or any other motorized vehicle; compact video system that may be worn or mounted; digital video flashlight; and LIDAR handheld speed enforcement gun.
