

DVM-750 Handheld Remote Controller

The Digital Ally HHC-750 Handheld Controller option can be used to control the DVM-750. The HHC-750 performs the same functions and commands as the buttons found on the front of the DVM-750. It can also be used in applications where the DVM unit is mounted in a location where the control buttons on the unit itself are not easily accessible by the operator.
