Rimage Evidence Disc System™ — The Dependable Law Enforcement Disc Production Solution

When managing digital evidence, there's no room for error. You need an evidence distribution and archiving solution that performs quickly, reliably, and efficiently. Failure is not an option when your agency's reputation is on the line

The Rimage Evidence Disc System fully automates both burning and direct-to-disc printing of multiple requests for unique CDs, DVDs and Blu-ray Discs™ with the simplicity of a shared network appliance. The quality and clarity of Rimage's permanent disc printing reflects the professional image of your agency. With no host PC or local operator required, archiving and distribution of digital case evidence from authorized users anywhere on the network is now as easy as printing to paper.

There's only one solution that offers all the features you need for flawless disc output across the entire department. One choice that will reduce costs, scale with increased case volume and ensure quality and reliability — the Rimage Evidence Disc System, a simple cost-effective way to generate discs containing the critical evidence to make your case.

The Rimage Experience

Rimage systems are the industry's highest performing, most time-tested digital publishing solutions. Specifically designed for unattended operation in the most demanding environments, Rimage systems are an integral part of the world's leading law enforcement imaging, software distribution, financial and photo production solutions.

CD

up to 700 MB

DVD

up to 8.5 GB

BD

up to 50 GB

Why Optical?

Disc technology has evolved from CD to DVD and now Blu-ray Disc with up to 50 GB of storage per disc. All of these disc formats offer backward compatibility for seamless transition and the ability to restore data to any computer with a compatible reader. Costly automated tape archiving systems require proprietary hardware and software to restore data. Now law enforcement organizations can produce both playable discs for court and archive discs for long term storage with a single Rimage Evidence Disc System.

INTERROGATION ROOMS

OFF-LINE ARCHIVING

Why the Rimage Evidence Disc System Leads the Industry

Automatic “hands-off” operation

The Rimage Evidence Disc System combines state-of-the-art robotics with robust operating software for truly automatic performance. Lower-end disc output units require operators to constantly intervene due to software failures, disc drops, hardware glitches and media supply monitoring. Rimage systems handle processes reliably and automatically, to minimize user intervention.

Seamlessly integrated output

Rimage partners with the biggest names in Law Enforcement solutions and software to produce the most unified and robust digital evidence workflows on the market. This direct integration allows many users to share a single Evidence Disc System that queues and processes disc jobs from your entire team. Sophisticated two-way software messaging provides remote system status updates right to your desk, so you can focus on your case, not monitoring equipment.

Professional disc printing that lasts

Producing discs by manually burning them in a PC then writing on the disc with a permanent marker, applying a sticky label, or printing with inkjet technology is not only time consuming and inefficient, it risks incorrectly identifying the content and can threaten the data integrity of the media. Rimage’s patented Everest disc printing produces full color, glossy printing that won’t smear, smudge, peel or fade and always matches the burned content. Now the printed face of each disc will last as long as the evidence on the other side. And with our innovative print tracking feature, you always know exactly how many discs can be printed with the current ribbon, reducing the need to monitor supplies.

The right media for evidence management

A bad batch of discs can stop production cold. Not all discs are manufactured to the tolerances required for robotic systems and the high-volume, on-demand performance you expect from Rimage Evidence Disc systems. Disc quality can vary significantly even within a single brand name, that’s why Rimage offers Evidence Media Kits manufactured to precise specifications to assure reliable, uninterrupted performance from your Rimage system. Based on longevity testing, Rimage guarantees that each Evidence Media Kit CD will retain its data for 100 years and each DVD for 50 years.*

Less downtime and less interruption to your work

Rimage systems experience less errors and downtime, but even the most reliable equipment occasionally requires service. A single call to Rimage Support connects you to an expert team of knowledgeable professionals. And unlike other disc output options, the Rimage Evidence Disc System has replaceable parts that can be easily swapped without tools or training, for quick and hassle-free on-site troubleshooting and repair. Rimage offers an array of service maintenance options to meet the unique needs of your organization.

What customers are saying about the Rimage Evidence Disc System

“ Soon after replacing our one-off process for producing discs with a Rimage system, our Department experienced incredible return on investment, increasing productivity to the point where detectives are now able to work three to four cases simultaneously.”
